Note: The initial sample for Peru changed slightly between the first and third call, because some young people who were not considered in the initial sample contacted us to participate in the Survey. In the case of the younger cohort, the final sample increased by 8 between the first and third call. For calls 4 and 5, the sample changed to include those who had decided not to participate in calls 1-3, those who had not been located, and those without a known phone number. In the case of the younger cohort, the sample increased by 219 between the third and fourth call.

Note: The initial sample for Peru changed slightly between the first and third call, because some young people who were not considered in the initial sample contacted us to participate in the Survey. In the case of the older cohort, the sample increased by 11 between the first and third call. For calls 4 and 5, the sample changed to include those who had decided not to participate in calls 1-3, those who had not been located, and those without a known phone number. In the case of the older cohort, the sample increased by 136 between the third and fourth call.

¹ For calls 3, 4 and 5 data for participants from the Tigray region were not able to be collected due to conflict in the region. Additionally, in calls 4 and 5 data from participants in parts of the Amhara region were not able to be collected due to conflict in the region.

² Both calls 2 and 3, covered 10 additional respondents who were not included in the call 1 sample, and calls 4 and 5 covered 6 additional respondents who were not included in the call 1 sample.

³ The sample for Peru slightly changed between calls 1 and 3 because some young people who were not considered in the initial sample contacted us to participate in the Survey. In total, the sample increased by 19 between calls 1 and 3. Additionally, the sample changed between calls 3 and 4 to include those who had decided not to participate in calls 1-3, those who had not been located, and those without a known phone number. In total, the sample increased by 355 between calls 3 and 4.

⁴ Number of interviews completed in Call 1 was updated after Call 2 fieldwork

⁵ The table includes all countries and both cohorts together.
