Peru Data Dictionary 12yr old Dataset

Data Files

A total of 18 data files are generated from the 12yr old dataset. The main data file is PEChildLevel12YrOld.sav which holds data at the Household/child level – i.e. one record per household. Because of the large number of variables at this level we have kept the variables form the Child Questionnaire separate from those from the Household Questionnaire. Data at the child level from the Child Questionnaire will be stored in the file PEChildQuest12YrOld.sav. The remaining data files hold data at a lower level. For example PESubCrops12.sav has one record for each crop grown by the household – i.e. potentially several records per household. The following table lists the 18 data files which are detailed in the rest of this document.

Data File Name	Description
PEChildLevel12YrOld.sav	All data at the Household/Child level – one record per household
PEChildQuest12YrOld.sav	Data from the Child Questionnaire which is at the Child level – one record per household
PESubHouseholdMembers12.sav	Data about individuals in the household – several records per household, one for each household member
PESubResidencyChanges112.sav	Data about residency changes made by the child's mother if she was not born in the same community in which she is now living. Households will only have records if the mother was born in a different community. One record per residency change.
PESubResidencyChanges212.sav	Data about residency changes made by the child's mother if she was born in the community in which she is now living and has moved away and returned. One record per residency change.
PESubPlotsOfLand12.sav	Data about plots of land used by the household – one record for each plot of land – households will only have records if they have land
PESubCrops12.sav	Data about crops grown by the household – one record per crop grown – only households that grow crops will have records in this data file
PESubPrimaryAssets12.sav	Data about productive assets used for the household's primary occupation – one record per asset
PEFoodOrganisations12.sav	Data about organisations from which the household has received donated food. Households will only have records in this file if they have received donated food. One record per organisation.

Data File Name	Description
PEDonatedFood12.sav	Data about donated food received by the household in the last 12 months. Households will only have records in this data file if they have received donated food in the last 12 months. One record per food item.
PESubOutgoings12.sav	Data about money or goods given to individuals or groups outside the household – one record per remittance
PESubGroups12.sav	Data about groups that household members belong to – one record per group
PESubPositionsOfAuthority12.sav	Data about positions of authority/responsibility that household members may hold – one record per position
PESubIllnesses12.sav	Data about illnesses the child has had – one record per illness
PESubInjuries12.sav	Data about injuries the child has had – one record per injuries
PESubLongTermHealth12.sav	Data about long term health problems that the child has – one record per health problem
PESubActivities12.sav	Data about activities done by the child on the previous working day – one record per activity
PESubChildWork12.sav	Data about paid work activities the child has done in the last 12 months – one record per activity

Child/Household Level Data

This section describes the variables and their codes found in the file PEChildLevel12YrOld.sav which come directly from the Young Lives questionnaire. The following codes are standard across most of the numeric variables in the dataset:

> 77=Not known – this is where the respondent says they do not know;
> 88=Not applicable – this is where the question is not applicable because of a response given to an earlier question;
> 99=Missing – the question was missed during fieldwork or was not clearly recorded;
> 79=Refused to answer – the respondent did not want to answer the question.

For variables where these values are feasible for the question the missing value codes are negative.

Preliminary Interview

FORMNO   Form number; this always has the value R28YRS for this second round of data collection.

CHILDID   Child Identification; this comprises 2 letters to identify the country (PE) followed by 6 digits. The first 2 digits indicate the sentinel site (01 through to 20); the 3rd digit is an 8 for the 12yr old dataset (it is a 1 in the 5yr old dataset);

the final 3 digits number the child within the sentinel site (001 through to 100). This is the key field within the dataset. This Child Identification number is exactly the same as was used in Round 1. In other words the same CHILDID number in each round refers to the same child.

DTOPI	Date of preliminary interview.
PEDOCNAM	Was name documented? Codes are: 00=No, 01=Yes
PETIPDOC	Documentation to check child's name. Codes are:

        01=Birth certificate/Ballot
        02=Health card
        03=Minsa Insurance Card
        04=Other

PETIPNAC	Does the child have a birth certificate? Codes are: 00=No, 01=Yes
DOB	Date of birth
PEDOCFN	Was date of birth documented? Codes are: 00=No, 01=Yes
PETPDCFN	Documentation used to check child's date of birth. Codes are:

        01=Birth certificate/Ballot
        02=Health card
        03=Minsa Insurance Card
        04=Other

PEPRID	Which was the first language that NAME spoke?

        31=Castellano
        32=Quechua
        33=Aymara
        34=Native of the Amazon
        35=Castellano & Quechua
        36=Spanish & Aymara

Data at Child Level - Child Questionnaire

This section describes the variables and their codes found in the file PEChildQuest12YrOld.sav which come directly from the Young Lives Child questionnaire. The following codes are standard across most of the numeric variables in the dataset:

> 77=Not known – this is where the respondent says they do not know;
> 88=Not applicable – this is where the question is not applicable because of a response given to an earlier question;
> 99=Missing – the question was missed during fieldwork or was not clearly recorded;
> 79=Refused to answer – the respondent did not want to answer the question.

For variables where these values are feasible for the question the missing value codes are negative.

CEILING   Ceiling item (possible values from 1 to 125)

MINERR   Minus errors (possible values from 0 to 100)

language1   This variable indicates the language used by the child to take the PPVT. The values that take this variable are 01 = Spanish, 02 = Quechua, 03=Other
The original variable used to calculate it is available in the YL dataset: "tblChSec1CChildDevelopment2" and the variable name is "ppcdlang"

language2   This categorical variable indicates the first language spoken by the child (mother tongue) in each cohort. The values that take these variables in each country are: 01 = Spanish, 02 = Quechua, 03=Other
The original variable used to calculate it is available in the YL dataset: "tblPreliminaryInterview" and the variable name is "chldlang".

Source   This variable indicates if the child have both tests or only one of them. Thus, the values that could take this variable are: 1 = Only PPVT, 2 = Only Math, 3 = Both tests.

score_ppvt   This variable is the corrected raw score of the child in the Peabody Picture Vocabulary Test. The corrected raw score was calculated by: 1) Correcting errors in test administration (as defined in the manual, e.g. eliminating items above the ceiling that should not have been administered), 2) Taking the highest item reached by the child, and 3) Subtracting lower items that were answered incorrectly and also lower items with poor statistical behavior (if they were not the same items; if they were the same item it would be subtracted only once). This variable was built from the datasets: "tblChSec1CChildDevelopment1", and "tblChSec1CChildDevelopment2" using the items ppvt001 to ppvt204 in Ethiopia, India and Vietnam; for Peru the items were tvip001 to tvip125.

rscorelang_ppvt

> This variable is the Rasch score (based on score_ppvt) calculated for each child. Also, as the mathematics test, the mean score was centered in 300 and the standard deviation in 50. This score could only be calculated for the most frequently spoken language in each country (coded as 1 in language1 above).

CONDPP   Were the conditions of the administration of the TVIP adequate? Codes are: 00=No, 01=Yes.

YNOADQ01, YNOADQ02

> Why were the conditions inadequate for the TVIP? Give up to two reasons. Codes are:

score_math
This variable is the corrected raw score of the child in the Math test. The score was built as the sum of all the items (1 for correct, 0 for blank or incorrect) in the test for the child except for those items that were eliminated due to poor statistical behavior. This variable was built from the dataset: "tblChSec1CChildDevelopment3" using the items math01 to math10.

rscorelang_math
This variable is the Rasch score (based on score_math) calculated for each child according to their mother tongue in the Math test. The mean score for each main language was centered in 300 and the standard deviation in 50.

OCCMTHS — How long has he/she been working in this occupation – number of months? Valid values are between 00 and 12. 00=<1 month

Residency Changes 1

These are the variables in the data file PESubResidencyChanges112.sav. This data file contains data on residency changes the mother (or caregiver) of the YL child has had since birth. Households will only have records in this file if the mother (or caregiver) was born in a different community to the one in which she is now living. Each record corresponds to a change in residence. Data can be linked to the household/child level data using the child identification variable CHILDID.

NB: Many of these variables could be used to identify locations and should not therefore be included in the archive dataset.

CHILDID — Child Identification

RCFID — Unique ID for the change in residence.

Child Work Activities

These are the variables in the data file <u>PESubChildWork12.sav</u>. This data file records details about paid work carried out by the YL child in the last 12 months. Households only have records in this data file if CHLDWORK=01 at the household/child level. The number of records per household is variable – there is one record per work activity. Data in this file are linked to data at the household/child level using the child identification variable.

CHILDID   Child identification.

WORKID   Unique ID for the work activity

WORKACT   What were these activities? Enter each type of activity not each individual job. Codes are:

         01=Farm work outside your own household (inc. plantations/other households)

Calculated variables

Calculated variables are all at the household/child level but many have been calculated by aggregating data at lower levels in the hierarchical structure, for example data in the household roster. We have divided the calculated variables into sections.

Anthropometry z-scores

The nutrition scores of "Height for age", "Weight for age" and "BMI for age" were calculated using an SPSS Macro for the growth standards that were downloaded from the WHO website. Below are the links:

Growth standards from birth to 5 years:_
http://www.who.int/childgrowth/standards/en/

Growth references from 5 to 19 years:
http://www.who.int/growthref/en/

zhaz	Height for age
zbmi	Body Mass Index (BMI)
bmiflag	Flag for zbmi <-5 or zbmi >5
hazflag	Flag for zhaz <-6 or zhaz >6
